

GlenTraces®

Granulated soil applied trace elements

Plants access 90% of all trace elements via their roots...if present!

GT Boron

- Safe to all crops

GT S2250

- Fast acting elemental sulphur

GT Zn

- For plant health and P uptake

GT Cu

- Plant and animal health

GT Mn

- Cell strength

GT Composite

- Multi elemental and low sodium to match plant requirements

Soil Conditioners

High grade granules that will spread up to 36m

Calcified Plus

- Highly reactive calcium, TE and humates

Calcified S

- PH neutral calcium and sulphur

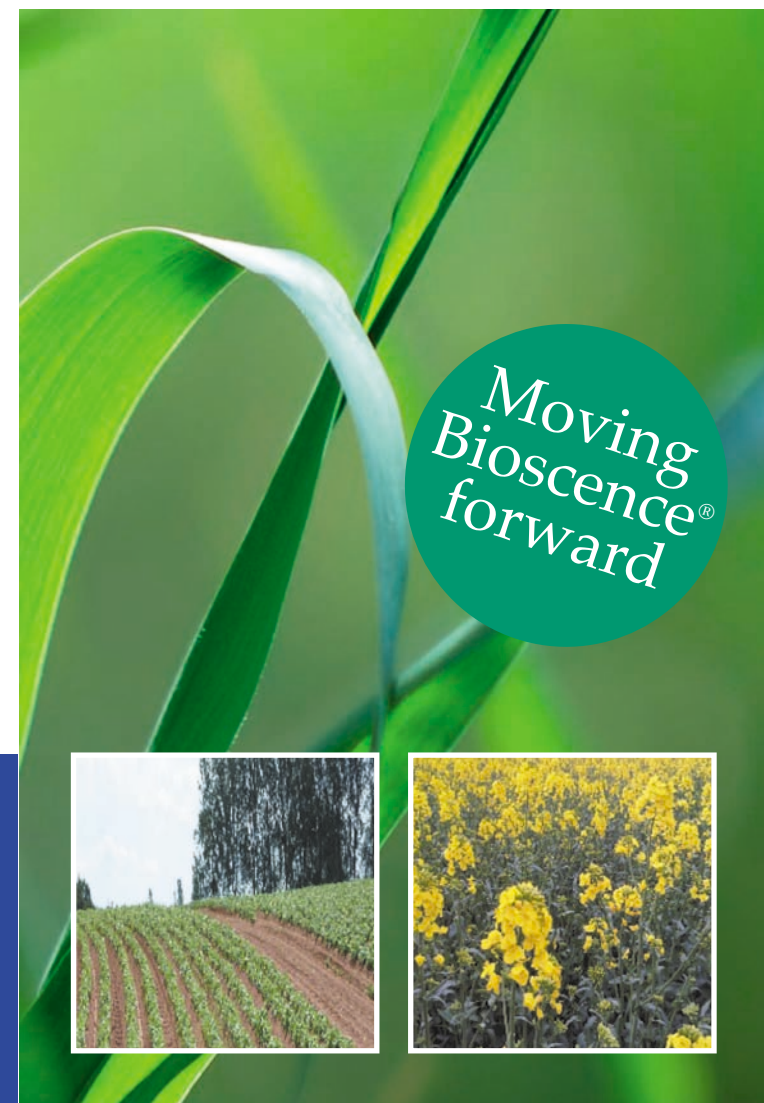

Glenside also offers:

- Biological agronomy explained
- UK Albrecht® Soil Audit
- Tailored soil to crop, nutritional programs
- Soil Health Profiling
- Precision farming soil fertility mapping
- Soil structural surveying and advice

Biological Product Options

Bio-Humates™

Soil and Plant Activators

Humaar™ Soil

- A stable mix of soil applied Humates
- The key source for building a sustainable soil microbial community
- Thereby forming the basis for long term soil fertility and carbon rich soils
- Making a soil more friable, allowing roots to penetrate whilst reducing working costs

Humaar™ Foliar

- Stable liquid mix of concentrated Fulvic and Humic acids
- Foliar applied
- Basis for natural plant and health fertility
- Cornerstone to crop disease tolerance

Carbon N Bal™

- High Energy - Rapidly Available
- Microbial energy source
- Basis for mixing with Biological product options
- Ideal carbon replacement source

Moving
Bioscience®
forward

Biagro®

UK designed and produced

Biagro®PhosN

- Highly Concentrated Phosphate solubilising bacteria. Helping to release soil reserves
- Free Living Nitrogen Fixing Bacteria. Providing a sustainable source of N
- UK strains, UK produced
- Phos N reduces the dependence on synthetic fertilisers

Biagro®MP

- Extensive consortium of beneficial Microbes, feeding the plants nutrients and helping fight disease
- Ideal for balancing the UK soil web
- Seed or soil applied
- Working together to produce healthy soil and plant environments

Biagro®Brassica

- Extensive consortium of beneficial Bacteria. Specially designed for Brassica crops

Biagro®Grass

- Extensive consortium of beneficial Fungi (VAM) Endo Mychorizol Fungi
- Specially designed for Grass species
- Proven to increase yields and the nutrient content of swards

Biostimulants

Stimulating - Plant Metabolism

Marinure® Mærit®

- Original Flowable formulation of plant acceptable hormones trace elements and amino acids
- The key to increasing root mass, tillering and production in crops
- Leading towards increased crop qualities and end market performance measures
- Such as increased bushel weights and vegetable shelf life

Marriphite™

- Plant acceptable hormones, trace elements and amino acids combined with active phosphate (Zn option available)

TE-NHanced®

- Enhanced Technical Efficiency
- Foliar applied plant Bio Stimulant
- Enhanced resilience to abiotic stress factors and diseases
